

Core::IManager

```
classDiagram
    class CoreIManager["Core::IManager"]
    class CoreTimeManager["Core::TimeManager"]
    CoreTimeManager --|> CoreIManager
```

The diagram shows a class hierarchy. At the top is the 'Core::IManager' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. At the bottom is the 'Core::TimeManager' class, represented by a larger rectangle with a dark grey header and a light grey body. The header contains the class name. The body contains a list of public members, each preceded by a '+' sign. A blue arrow with an open triangular head points from the 'Core::TimeManager' class up to the 'Core::IManager' class, indicating that 'Core::TimeManager' inherits from 'Core::IManager'.
